Sorted by Yield

Continued on page 2

Cooperator: Texas A&M University

All data was analyzed using JMP. Mean separation was performed using LSD and is designated by the letter groupings. Those hybrids followed by the same letter are not statistically different at P<0.05.

*Yields corrected to 14% moisture

**Lodging notes were taken at harvest from all reps and averaged. Lodging was due to a combination of moisture stress during the growing season, aphid pressure, and several rain events prior to harvest.
